LOCAL SPECTRUM OF A FAMILY OF OPERATORS

SIMONA MACOVEI

Communicated by M. Mbekhta

ABSTRACT. Starting from the classic definitions of resolvent set and spectrum of a linear bounded operator on a Banach space, we introduce the local resolvent set and local spectrum, the local spectral space and the single-valued extension property of a family of linear bounded operators on a Banach space. Keeping the analogy with the classic case, we extend some of the known results from the case of a linear bounded operator to the case of a family of linear bounded operators on a Banach space.
